Claims 1-41 drawn to methods for treating ototoxicity in patient exposed to noise employing a methionine or methionine – like moiety having a structure (see claim 2) wherein $X = -OR^1, OCOR^1, COOR^1, CHO, CH(OR^1)_2$ or CH^2OH and $Y = NR^2R^3$ or OH which is classified in class 514, subclass 478, 561, 665, 702, 712 and 727.

Applicant is therefore required to elect a specific type of core structure that defines X and Y for examination on the merits.

The several inventions above are independent and distinct, each from the other, as they have acquired a separate status in the art as a separate subject matter for inventive effect and require independent searches. It is noted that a reference to one type of compound would not be a reference to another type of compound under 35 U.S.C. 103. Further, the claims read on a multitude of type of compounds, which would require many field of searches that would be an undue burden on the Examiner. Therefore, restriction for examination purposes is proper.

Applicant is required to make a provisional election even though this requirement is traversed.
